Upwardly Mobile Workplaces

Decca Contract offers innovative height adjustable technology for work surfaces on all casegoods and tables. Based on ongoing research and development to facilitate healthy work styles and environments, Decca's variable height work surfaces allow users to adjust table heights from the standard seated height of 30" to a standing height of 42". Adjustable work surfaces help to promote movement during the workday and encourage users to alternate between sitting and standing. In addition to improving circulation and overall comfort levels, variable height work surfaces have also resulted in increased productivity in the workplace by accommodating diverse work modes.

Raising Standards

Commercial workplace environments differ greatly in design and function, but the demands for ergonomic performance and adaptability are constant. Decca's height adjustable technology can be applied to any of its standard casegoods collections, including Float™, Index™ and GL™. From heavy-duty workstations, to bridges to standard desks and worktables, Decca's electronic lift panels ensure silent adjustability to boost ergonomic performance with increased user comfort. In addition, height adjustable work surfaces and tables can improve communication and collaboration between colleagues for advanced productivity and profitability for businesses and end-users.

Elevating Design

While Decca's lifting technology can be applied to any work surface, casegoods or tables, the hardware and power panels are discreetly integrated into our products. Our lift control panels are small, stylish, and user friendly. The panel itself is adjustable, enabling it to be discreetly mounted in many configurations. Therefore, it blends perfectly with any desktop, work surface or tabletop.

Moving Up

Typical workers in the commercial workplace spend up to 95% of their workday sitting. Even the simplest movement is beneficial to wellbeing and productivity. In addition, Decca knows nothing is standard about today's commercial interiors. All furniture is required to combine form and function at the highest levels, and our products must accommodate and promote adaptability. A work surface that goes up for a collaborative review session may need to come down for the next meeting or job function.

Decca's height adjustable technology can be applied in an infinite number of applications. From our award-winning standard products to any singular, custom-designed work surface or table, Decca's engineers and craftsmen are elevating the commercial workplace to new levels.

Contact your Decca representative for more information on our height adjustable capabilities, and lift your next project to a higher level.
