SPAN

Designer Brian Graham draws inspiration from the structures of the modern built environment to create Span, a simple platform designed to support a broad range of functional elements including seating, storage or a tabletop. The platform is anchored by a welded stainless steel base composed of refined forms with architectural reference points. As a basis for seating, Span emphasizes the contrast of soft and hard, of tailored cushions resting on a bridge of steel. However deployed, the design makes reference to classic architectural features—and the dialogue between the support and the supported—in a distinctly modern manner.

Brian Graham

"Everything is designed," notes Brian Graham who, conversely, designs almost everything. Perhaps best known for elegant casegoods and office furniture systems, Graham is involved in a wide range of genres, consulting across disciplines and crafting integrated design programs for his clients.

Graham received a BFA in Interior Architectural Design at California State University, Long Beach. He established the Graham Design studio in San Francisco, to offer a strategic approach to the design, development and marketing of furniture, lighting and related products for the contract, residential and hospitality markets.

With deep roots in architecture and interior design, Graham's broad visual literacy allows him to orchestrate comprehensive programs as he has done for Decca, advising on the company's overall creative direction, as well as contributing product and showroom design.
